

ABSTRACT OF THE DISCLOSURE

A process for displaying quotes on a trader's screen used in an automatic trading system of the type which includes a plurality of traders. Some, but not all, of the traders have bilateral credit with one another, those traders having bilateral credit with one another being traded in counterparties. A quote made by the first trader is displayed in the first trader's trading screen and when his quote can be accepted by more than one, but less than all trading counterparties, an indication of that fact is provided to him. In one embodiment, an indication is provided to the first trader of the percentage of trading counterparties that can accept his quote.
